InDorse Delivers Robust Reporting for Data Loss Discovery

Call-Home™ 4.2 features custom report fields and access from mobile devices

New York, NY – November 14, 2011 – [InDorse](#), the leading provider of data loss discovery solutions, announced the availability of Call-Home 4.2, the latest version of its award-winning product for detecting unauthorized use of confidential files anywhere on the Internet.

“In the era of collaboration, cloud computing and consumerism of IT, protecting confidential data at the file level is absolutely essential,” said Rob Marano, President and CEO, InDorse. “Our customers are using Call-Home to tag thousands of documents in sub-second time to protect sensitive files that are shared with third parties. In response to our customers’ needs, we have delivered highly scalable, enterprise-class reporting because we understand that enterprise-wide deployment of our data loss discovery solution is critical to the secure operation of their business.”

Call-Home 4.2 provides the following new features:

- Highly scalable report platform designed for enterprise-wide implementations
- The ability to access Call-Home reports from mobile devices including iPhone and Android
- A simplified interface which makes it easy for all users to generate reports
- Advanced filtering allowing users to generate reports unique to their specific needs
- Custom fields allow users to generate reports based on email address, username, and other important identifiers for improved intelligence
- Report by User Groups providing tracking of files specific to departments within the enterprise
- Rapid integration with off-the-shelf reporting systems

Call-Home 4.2 is available now. Please contact InDorse for pricing.

About InDorse

InDorse delivers data loss discovery and intelligence solutions that strengthen existing data loss prevention and digital rights management implementations. Our unique, award-winning products are rapidly deployable and non-invasive to business processes, leveraging robust watermarks and native file security elements to detect, track and deter unauthorized usage of documents, images and screen captures containing confidential information.
