The InDorse Solution Suite is designed to allow you to quickly integrate our unique data loss discovery and intelligence products into the systems already in place within your enterprise, further extending the value of your information security investment.

InDorse Watermark™ and Call-Home™ tagging actions can be triggered according to your corporate security policies – providing an unprecedented layer of added protection to documents you've identified as highly confidential or business-critical.

Call-Home uses native file security elements to detect and monitor file opens anywhere on the Internet. InDorse Watermark*, which can be used in conjunction with Call-Home, embeds a unique invisible ID into documents, images and screen displays and is strong enough to survive resizing, change-of-file format and screen captures. InDorse Web Crawler searches public Web sites to detect unauthorized posting of watermarked content.

Web Services Integration

InDorse supports integration via SOAP and RESTful APIs.

Plug-In Support (Current and Planned):

- Microsoft File Classification Infrastructure (FCI)
- Microsoft SharePoint
- Salesforce.com
- Microsoft Outlook Client
- Microsoft Exchange Server**
- Data loss prevention systems**
- Digital rights management systems including Adobe® LiveCycle® and Microsoft RMS**

The InDorse solution can be easily modified if enterprise security policies or business processes change.

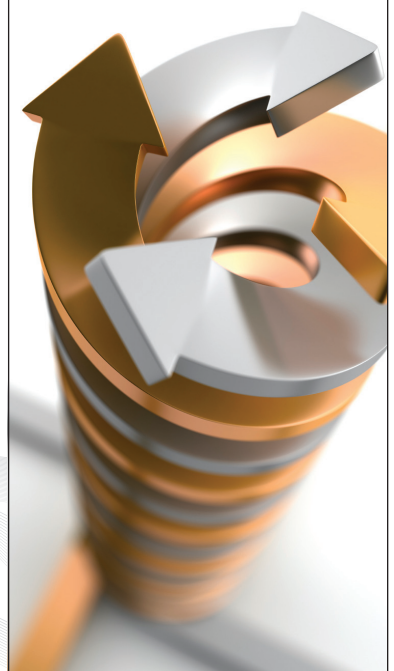

Business Applications

InDorse products are currently implemented at Fortune 500 companies, delivering significant return on investment (ROI). Specific InDorse success stories include:

- Proving unauthorized disclosure of confidential bids – millions in revenue recovered, including legal costs
- Deterring unauthorized leakage of specifications of a multi-million dollar software development project, still ongoing
- Revealing undiscovered waste of departmental resources in producing reports sent globally to clients which were never being opened or used

If your business can gain a competitive advantage by automatically detecting unauthorized use of your confidential documents anywhere on the Internet, InDorse can help.

INDORSE TECHNOLOGIES

Reporting

In addition to logging and reporting detailed usage data of unauthorized file opens via Call-Home, InDorse also provides data feeds for your existing reporting tools including Microsoft Excel, Crystal Reports and business intelligence systems. Direct API integration with reporting tools via our XML interface is also supported. InDorse Watermark logs tagging events and associated text to the Microsoft Windows Event Log and optionally to SQL server in XML format.

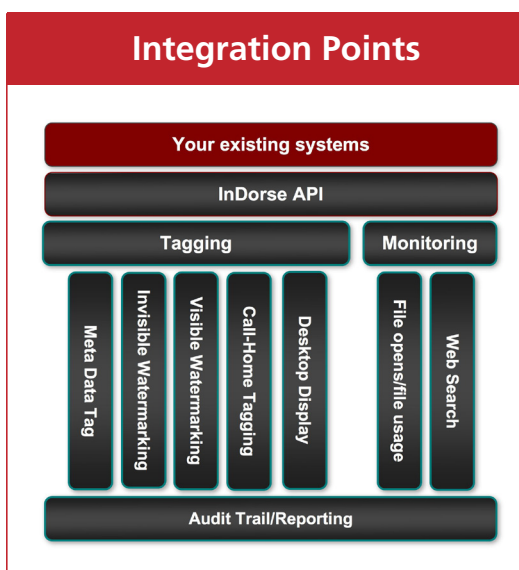

Advanced Customization

InDorse supports the following APIs for advanced customization:

- SOAP
- RESTful
- Command-line interface

InDorse Professional Services can work with you to create a complete, customized solution tailored to your specific business needs.

Integration Points

About InDorse

InDorse delivers data loss discovery and intelligence solutions that strengthen existing data loss prevention and digital rights management technology. Our unique, award-winning products are rapidly deployable and non-invasive to business processes, leveraging robust watermarks and native file security elements to detect, track and deter unauthorized usage of documents, images and screen captures containing confidential and proprietary information.
