

INDORSE SHOWCASES AWARD-WINNING FILE ASSURANCE AND PROTECTION SOLUTION AT CSO EXECUTIVE SEMINAR SERIES

New York, NY — June 8, 2010 — [InDorse Technologies](#), the leading provider of file assurance and protection solutions, today announced that Rob Marano, InDorse's CEO, will participate in the CSO Executive Seminar Series Event on Data Protection and Encryption, June 9th, Roosevelt Hotel, New York, NY. InDorse will demonstrate its [advanced document protection solution](#). InDorse discovers and tags sensitive business files, monitors and controls access to sensitive documents, and tracks and protects confidential files on any IP network — without desktop software agents or impact to end users.

From the moment an employee creates a file that contains regulated or confidential information, and stores it on the corporate network, the data must be classified, monitored and protected effectively. Rob Marano, InDorse Technologies CEO elaborates, "Every year, the amount of unstructured and unsecured data that companies create grows exponentially. Whether the documents are scanned contracts, health records, customer credit card numbers, internal price lists, or M&A deal information, the problem is the same: how can a company find, classify, and secure all this sensitive data without disruption to the business? Our award-winning technologies solve this problem without desktop agents, by finding the documents, monitoring access and then enforcing document layer protections dynamically. This kind of monitoring and protection has existed within the network layer for many years, but our innovation now enables this at the document level. Companies of all sizes are using our technology to better manage their risk, comply with regulations, support audit requirements, and identify document loss and theft."

Attendees at the CSO Executive Seminar Series on Data Protection and Encryption understand the implications of securing business-critical data and the best practices and solutions required to help prevent data loss occurrences. The seminar offers a unique face-to-face opportunity to network with individuals responsible for managing data protection and encryption for their organization.
